<b>I</b>	<b>Jinja2 Documentation</b>	<b>3</b>
<b>II</b>	<b>Additional Information</b>	<b>5</b>

Jinja2 is a modern and designer friendly templating language for Python, modelled after Django's templates. It is fast, widely used and secure with the optional sandboxed template execution environment:

```
<title>{% block title %}{% endblock %}</title>
<ul>
{% for user in users %}
  <li><a href="{{ user.url }}">{{ user.username }}</a></li>
{% endfor %}
</ul>
```

**Features:**

- sandboxed execution
- powerful automatic HTML escaping system for XSS prevention
- template inheritance
- compiles down to the optimal python code just in time
- optional ahead of time template compilation
- easy to debug. Line numbers of exceptions directly point to the correct line in the template.
- configurable syntax
